

# Aaron Stone

## Summary

High-performing Technical Support Engineer and Brandeis CS graduate with 5 years of experience at Tulip Interfaces. Leveraging 5 years of Technical Support experience, and a DevX software engineering externship and an intimate understanding of the Tulip product architecture and customer pain points.

## Experience

### DevX Software Engineering (Externship) | Jan 2026 – Present

- **Internal Tooling:** Developed load testing tools for the entire Tulip product using K6 and Ironhorse, prioritized on the slowest endpoints and slowest product areas.
  - Integrated data generation using a generalized system for creating data based on real Tulip usage load from customer experience.
- **API Enhancement:** Rebuilt load testing API client and testing suites, to reduce time required to create load tests.
- **Code Quality:** Contributed to the Tulip codebase through peer-reviewed PRs, focusing on modularity and internal developer experience.

### Technical Support Engineer | 2023 – 2026

- **Engineering Liaison:** Acted as the primary bridge between CSM and Product & Engineering, identifying root causes for critical platform bugs, incidents, and RCAs.
  - Investigated multiple key RCAs and incidents that helped stabilize large customers such as Avon Protection, Terex, DMG Mori, and others.
  - Contributed heavily to backend architecture and engineering strategy with all engineering teams, particularly during high pressure, global incidents
- **Technical Work:** created custom scripts using mongosh and JS to investigate customer issues and provide deep insights on customer bugs and scalability. Used scripts in app building and analysis to identify app architecture patterns.
- **Technical Troubleshooting:** Resolved technical questions related to Tulip app logic, debugging, identifying basic performance bottlenecks.
- **Knowledge Leadership:** Created high-traffic documentation and KB content used for customer onboarding.

## Education

Brandeis University | 2017 – 2021

B.S. in Computer Science \* Honors: Completed Honors Thesis – Designed and Presented Demo Thesis of 3D Visual Programming No-Code System built & designed from scratch for experimental industry applications such as VR, AR, machine vision.

- Standardized Testing: SAT: 2300 (99th Percentile).

## Technical Skills

- **Languages:** JavaScript, Mongo, TypeScript, Bash, Python, SQL

- **Tools:** GitHub, Claude Code (and various MCPs), Jira, Docker, Postman, Zendesk
